

along — Sprint 2: Trips & People

Sep 28, 2026 · @Praveenkumar Jogannavar

Split out from the along — Sprint Epics, User Stories & Journey Maps document for standalone sprint planning.

Goal: an organizer can create a trip and get every kind of person — registered friend, or guest with no account — into it.

User stories

ID	Story	Acceptance
2.1 (US-01)	As a user, I want to create a trip so I can organize a group journey	Valid name + dates → trip created, I become owner, created once even on retry
2.2 (US-02)	As an owner, I want to add guest participants so people without accounts can participate	Adding a guest name creates a participant record with no user account required
2.3 (US-16)	As a user, I want to invite friends using a link	Recipients open the invite and can join after authenticating
2.4	As an invited user, I want to preview the trip before joining	Invite preview shows name, destination, dates, and participant count without exposing financial data
2.5 (US-17)	As a guest, I want to later become a registered user without losing my history	Claiming maps historical references to my account without duplication

Success criteria

- $\geq 60\%$ of trips reach 3+ members within 48 hours of creation.
- Zero duplicate trips or memberships from retried creates/accepts (idempotency verified).
- Invite-to-join conversion $\geq 50\%$ for links opened.
- Guest-to-registered conversion is measurable (tracked via `guest_claim_started / _completed`).

User flow

1. Home → Create Trip → enter name, destination, dates → trip created, I'm owner.
2. Invite/Share → generate link → share via OS share sheet, or add a guest by name directly.
3. Friend opens link → sees preview → signs in/up → joins trip (idempotent).
4. Later, a guest installs the app and claims their participant profile → history carries over.

Journey map

Stage	User does	User feels	System response	Opportunity
Organize	Creates the trip, adds a few guests immediately	In control, a little rushed	Trip and guest rows created instantly	Let guests be added in the same flow as trip creation, not a separate step
Invite	Shares a link in the group chat	Hopes people actually join	Link opens a no-login preview	Preview should sell the trip (name, dates, who's in) before asking to sign up
Join	A friend taps the link, signs up, lands in the trip	Relief that it "just worked"	Idempotent join, no duplicate accounts	Skip any unnecessary screens between OTP and landing inside the trip
