

along — Sprint 3: Itinerary

Sep 28, 2026 · @Praveenkumar Jogannavar

Split out from the along — Sprint Epics, User Stories & Journey Maps document for standalone sprint planning.

Goal: the group can build a shared timeline, say who's joining each activity, and drop in a location as plain text or a Google Maps link that renders as a live preview.

User stories

ID	Story	Acceptance
3.1 (US-03)	As a member, I want to add an itinerary item so the group can see the plan	Valid item saves and appears on the correct date
3.2 (US-04)	As a member, I want to select activity participants so the group knows who is joining	Only the selected participants are associated with that item
3.3	As a member, I want to paste a Google Maps link for a location and see it rendered as a map	A recognized link resolves to a place and shows an embedded map preview on the item
3.4	As a member, I want to type a plain location name when I don't have a map link	Plain text saves and displays as-is, no map preview forced
3.5	As a member, I want to move an item to a different day if plans change	Item updates to the new date and reorders on the timeline

Success criteria

- $\geq 70\%$ of trips have at least one itinerary item within the first day of trip creation.
- $\geq 40\%$ of itinerary items with a location use a resolvable Maps link (adoption signal for the feature).
- Maps-link resolution succeeds for $\geq 95\%$ of standard Google Maps URL formats (place, short link, coordinates).
- Zero itinerary items lost or corrupted when moved between days.

User flow

1. Trip Overview → Itinerary → tap Add.
2. Enter title, date/time, type → paste a Maps link or type a location.
3. If a Maps link is recognized → map preview renders inline for confirmation before save.
4. Select participants from the Participant Picker → Save → item appears on the timeline.

Journey map

Stage	User does	User feels	System response	Opportunity
Plan	Pastes a restaurant's Google Maps link while planning	Wants confirmation it's the right place	Map preview renders immediately	Show the resolved place name/address so they can confirm before saving
Assign	Picks who's coming to dinner	Wants this to double as the future expense split	Participants saved against the item	Surface "these people will be suggested for the expense" as a hint
Review	Scrolls the timeline day by day	Wants an at-a-glance sense of the trip	Grouped-by-day view with map thumbnails	Map thumbnails make the itinerary feel more like a real trip, less like a list
